

#1. Instalación coolify

```
curl -fsSL https://cdn.coollabs.io/coolify/install.sh | sudo bash
```

#2. Creación de repositorio en github

#3. Desde nuestro proyecto en local. Subir a repo de github

```
git branch -M main
```

```
git remote add origin https://github.com/poviweb/nodeTest.git
```

```
git push -u origin main
```

#Crear la carpeta .github/workflows

#Crear el fichero deploy.yml

```
name: Deploy to Coolify
on:
  push:
    branches: [ "main" ]

jobs:
  deploy:
    runs-on: ubuntu-latest
    steps:
      - name: Trigger Coolify deploy
        run: |
          curl -X POST "${{ secrets.COOLIFY_DEPLOY_WEBHOOK }}"
```

#subir nuevos ficheros a git

#settings - general

```
